Subj: LORSTA Upolu Point 625-Ft Tower Inspection Report

Ref: (a) COMDTINST M11000.4, Tower Manual, Paragraph 3-3-4

1. In compliance with reference (a), the LORSTA Upolu Point 625-Ft Tower Inspection Report is forwarded for your review and file.

2. The corroded tower structural and guy members discussed in the report are not expected to present any serious problem prior to the scheduled tower maintenance. To insure that there will be no further deterioration of the structural members, we plan to do maintenance on the tower in September 1983 as recommended in the inspection report. Minor changes in the scope of maintenance work may be made during the preparation of contract specifications.

J. W. COSTE, JR
